

TRANE®

RT-PRC021-EN

Package Gas / Electric Units

Convertible Models
YCC018-060

1½ – 5 Ton

Pub. No. 22-1295-05-0303 (EN)

General Features

It's Hard To Stop A Trane.[®]

T-TOPTM

WEATHERGUARDTM
corrosion resistant screws

Powder Paint

WATER-SHED Base

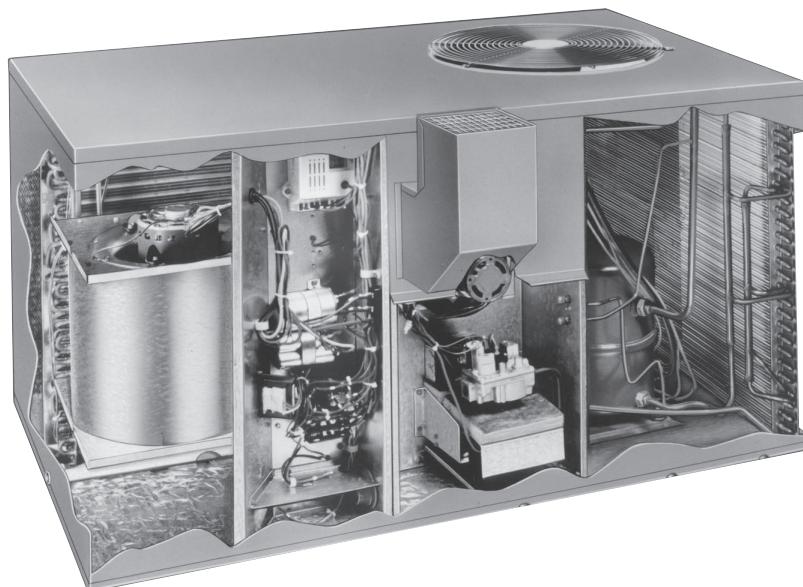

High Efficiency

Climatuff[®] compressor

DuraTuffTM plate fin coil

Single Stage Gas Furnace

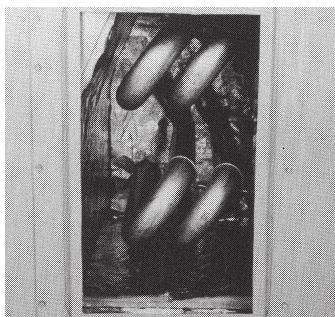

Easy Access

Features and Benefits

Standard Equipment

- **High Efficiency**
IMPACK performance is the highest in the industry at 16 SEER.
- **Climatuff® compressors**
Protection against chemical, electrical, and mechanical stresses are built in for efficiency and a longer life. The compressors are backed by a 5-year limited warranty, with an optional warranty for 5 more years.
(single phase residential use only)
- **Powder Paint**
Beautiful high gloss silver gray finish blends with any architectural style. New powder paint covers surfaces uniformly increasing protection from rust and corrosion.
- **WEATHERGUARD™ corrosion resistant screws**
Holds it all together beautifully. Resists rust and corrosion.
- **WATER-SHED Base**
Superior water integrity is accomplished with the **WATER-SHED** base pan having elevated downflow openings and a perimeter channel that prevents water from draining into the ductwork.
- **T-TOP™**
Exclusive one piece, solid unit top for improved water integrity and easy component access.
- **DuraTuff™ plate fin coil**
Refrigeration coils are built with internally enhanced copper tubing for high efficiency with less coil area.

- **Single Stage Gas Furnace**
The furnace features aluminized tubular heat exchangers that have demonstrated their durability in torturous life cycle tests and fire tests at either 20 or 25 MBTUH per tube on natural gas or 24 MBTUH on propane. The heat exchanger is backed by a 10 year limited warranty with an optional warranty available for the 11-15th years.
(residential use only)

Features and Benefits

- **Venting**

Induced draft venting reduces combustion problems associated with high winds and combustion panels that have been improperly replaced.

- **California NOx**

The standard unit meets California NOx requirements eliminating the inventory problems associated with unique models or kits.

- **One for Us...**

- Two for Customer**

Three-try direct spark ignition system eliminates pilot related problems and provides unsurpassed ignition reliability.

- **Commonality**

The common cabinet among the TCC's, WCX's, and YCY's minimizes both the training of sales and service personnel and replacement parts inventory.

- **Easy Access**

Most electrical components can be diagnosed and replaced with the removal of one panel that is attached with two screws.

- **Flexibility**

A single curb fits the entire IMPACK line from 1.5 tons through 5 tons thereby providing great installation flexibility on shopping malls, factories, schools, and other commercial buildings where a mix-match of tonnages and utilities is desired.

- **Shipping**

Unit dimensions were carefully selected to provide an attractive aspect ratio and for shipping and handling considerations.

- **Good Neighbor**

Most units can be installed flush with the residence or building thereby minimizing the ground space required. Blankets of insulation reduce blower noise and energy losses to the outside environments.

- **Rooftop Mounting**

The cabinets are physically smaller than most competitive models. This means less intrusive installations on residential rooftops where aesthetics are critical.

- **Standard Thermostats**

No special thermostats are needed with IMPACK units.

- **Filter Frame Kit**

The IMPACK filter frames accept standard filters and fit inside the unit. The frame kits function in either horizontal or downflow duct configurations.

- **UNI-CURB**

One universal curb fits all the IMPACK models. It ships knocked down. The curb design incorporates the popular locking tabs for quick and easy assembly. Full perimeter curbs are also available for all models.

Standard Equipment

- **Convertibility**

IMPACK units are easily converted from horizontal to down flow with the removal of one screw from each panel. Accordingly, the need to stock both dedicated horizontal and dedicated down flow models has been eliminated.

- **Installation**

The ease of installation and application flexibility exhibited through the design reduce both field time and material.

- **Structure**

The units are lighter weight through the use of high technology components thereby reducing mounting structure requirements and difficulty when manhandling.

- **Handling**

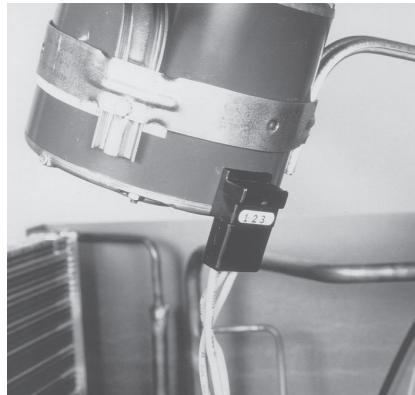

The three-way wooden skid allows for easy loading between the wheel wells on pickup trucks for transporting to job sites.

- **Application**

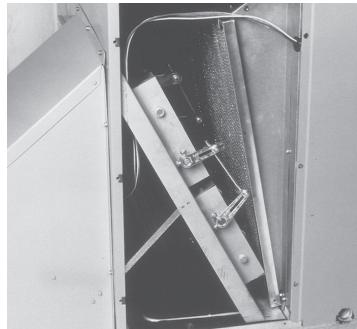

The low profile horizontal duct take-offs eliminate the need for expensive transition ducts in crawl space applications.

- **Duct Flanges**

Only IMPACK has downflow duct flanges for duct attachments that preserve the built-in water integrity.

IMPACK Accessories

- **Service**

All wiring is both numbered and color coded thereby reducing training and servicing costs related to circuit tracing and component replacements.

- **Maintenance**

A plug on the outdoor fan motor allows the top cover to be removed completely without the hassle of cumbersome wires. The unique service orifice ring allows the indoor fan motor/blower to be removed as a unit.

- **Corrosion**

The drain pan is engineered material and eliminates the need for coatings and sealers to prevent sweating and corrosion. The heavy gauge, zinc-coated steel cabinet has a weather resistant enamel finish that stays attractive and protects your investment for years.

- **Low Ambient Control**

Standard cooling operation to 55° F. as shipped, zero degree ambient cooling is accomplished with two kits. One for low cost installations when full tonnage is not needed. The other kit maintains head pressure and full capacity at zero degrees.

- **Quality and Reliability Testing**

We perform a 100% coil leak test at the factory. The evaporator and condenser coils are leak tested at 200 psig and pressure tested to 450 psig respectively. In addition the IMPACK designs were rigorously rain tested at the factory to ensure water integrity. Shipping tests are performed to determine packaging requirements. Factory shake and drop tests are used as part of the package design process to help assure that the unit will arrive at the job site in top condition. Additionally, all components are inspected at the point of final assembly. Substandard parts and components are identified and rejected immediately. Every unit receives a 100% run test before leaving the production line to make sure it lives up to rigorous Trane requirements. We at Trane test our designs at our factory and not on our customers!

- **Economizer**

The downflow economizer fits inside the unit with only the rain hood and barometric relief on the outside. Cabling is shipped with the economizer. This cabling is easily routed to the control box where it terminates in low voltage pigtailed. The economizer features a fully modulating low voltage motor eliminating the need for any high voltage wiring. The economizer must be used with the filter frame kit...no return air filter in the economizer kit. A dry bulb sensor is shipped with the economizer. The downflow economizer was not designed for use in horizontal

Features and Benefits

applications. A horizontal only economizer (which fits externally) is available.

- **Enthalpy Control Kit**

For those applications specifying an economizer with enthalpy control, this control can be used in place of the dry bulb sensor or, alternately, two enthalpy controls can be paired to provide differential enthalpy control.

- **25% Fresh Air Kit**

The kit installs over the horizontal return air opening with six screws for downflow requirements. It can be used on horizontal air flow applications by cutting a hole in the return air duct or in the unit filter access panel.

- **Rectangular to Round Duct Kits**

The adapter kit can be used in either horizontal or downflow applications.

IMPACK Accessories

- **Propane Kits**

The BAYLPKT022A propane kit fits all of the IMPACK single stage models. This kit has been constructed for greatest field flexibility and to minimize the number of parts that have to be discarded.

The BAYLPSS001 propane kit also includes 5 stainless steel burners.

- **Low Ambient Kit**

An EDC provides low ambient cooling to 0° F. with some reduced capacity and protects the system against evaporator icing during other unusual cooling conditions.

- **Head Pressure Control Kit**

This kit includes a solid state outdoor motor control, junction box, and wiring. It provides full capacity down to 0° F.

- **Lifting Lug Kit**

Four reusable lugs in each kit allow units to be easily lifted to rooftop installations. These lugs snap (no screws required) into slots in the unit drip lip channel.

- **High Static Motor**

Consists of a higher torque indoor fan motor.

- **Start Kit**

The kit mounts in the control box for those installations specific conditions such as excessive voltage drop due to long wires. (This is a capacitor and start relay kit not a PTC device.) This kit can be a good specification buster!

- **Coil Guard Kit**

The guards are coated 1"X3" wire grills. These grills will protect the coil from normal shipping and installation damage.

NOTES:

① Must use filter frame when economizer/fresh air kit is used.

④ Downflow only.

② Dry bulb control standard with economizer.

⑤ Use Low Ambient Condenser Motor With This Kit (except on YCC048-060F).

③ Ships knocked down.

⑥ Low Ambient cooling requires crankcase heater (BAYCCHT---A).

① Rated in accordance with A.R.I. Standard 210/240. Noise tested in accordance with A.R.I. Standard 270. A.R.I. standard rating conditions are: 80 D.B. 67 W.B. entering air to indoor coil. 95 D.B. entering air to outdoor coil.

② All models are UL Listed. Ratings shown are for elevations up to 2000 ft. For higher elevations reduce ratings at a rate of 4% per 1000 ft. elevation.

③ Convertible to LPG.

④ This value is approximate. For more precise value, see Unit Nameplate.

⑤ Based on U.S. Government Standard Tests.

⑥ Filters must be installed in return air stream. Square footages listed are based on 300 f.p.m. face velocity. If permanent filters are used size per manufacturer's recommendation with a clean resistance of 0.05" W.C.

⑦ Unit is shipped on high input. unit is convertible to low input with a Low Fire accessory kit.

① Rated in accordance with A.R.I. Standard 210/240. Noise tested in accordance with A.R.I. Standard 270. A.R.I. standard rating conditions are: 80 D.B. 67 W.B. entering air to indoor coil. 95 D.B. entering air to outdoor coil.

② All models are UL Listed. Ratings shown are for elevations up to 2000 ft. For higher elevations reduce ratings at a rate of 4% per 1000 ft. elevation.

③ Convertible to LPG.

④ This value is approximate. For more precise value, see Unit Nameplate.

⑤ Based on U.S. Government Standard Tests.

⑥ Filters must be installed in return air stream. Square footages listed are based on 300 f.p.m. face velocity. If permanent filters are used size per manufacturer's recommendation with a clean resistance of 0.05" W.C.

⑦ Unit is shipped on high input, unit is convertible to low input with a Low Fire accessory kit.

*See unit nameplate for proper input adjustment

① Rated in accordance with A.R.I. Standard 210/240. Noise tested in accordance with A.R.I. Standard 270. A.R.I. standard rating conditions are: 80 D.B. 67 W.B. entering air to indoor coil. 95 D.B. entering air to outdoor coil.

② All models are UL Listed. Ratings shown are for elevations up to 2000 ft. For higher elevations reduce ratings at a rate of 4% per 1000 ft. elevation.

③ Convertible to LPG.

④ This value is approximate. For more precise value, see Unit Nameplate.

⑤ Based on U.S. Government Standard Tests.

⑥ Filters must be installed in return air stream. Square footages listed are based on 300 f.p.m. face velocity. If permanent filters are used size per manufacturer's recommendation with a clean resistance of 0.05" W.C.

⑦ Unit is shipped on high input. unit is convertible to low input with a Low Fire accessory kit.

Controls

Field Installed Control Options

Economizer Controls

The standard equipment offering is a fixed dry bulb changeover control. In addition to the standard offering, there are two other field installed control accessories.

Enthalpy Control

Replaces the dry bulb control with a solid state dry bulb and wet bulb changeover controller which has a fully adjustable set point. Enthalpy control offers a higher level

of energy savings potential than the standard dry bulb control due to the additional wet bulb sensing capability.

Differential Enthalpy

Replaces the standard dry bulb control with two enthalpy sensors that compare total heat content of the indoor air and outdoor air to determine the most efficient entering air source. This control option offers the highest level of energy efficiency available.

Thermostats

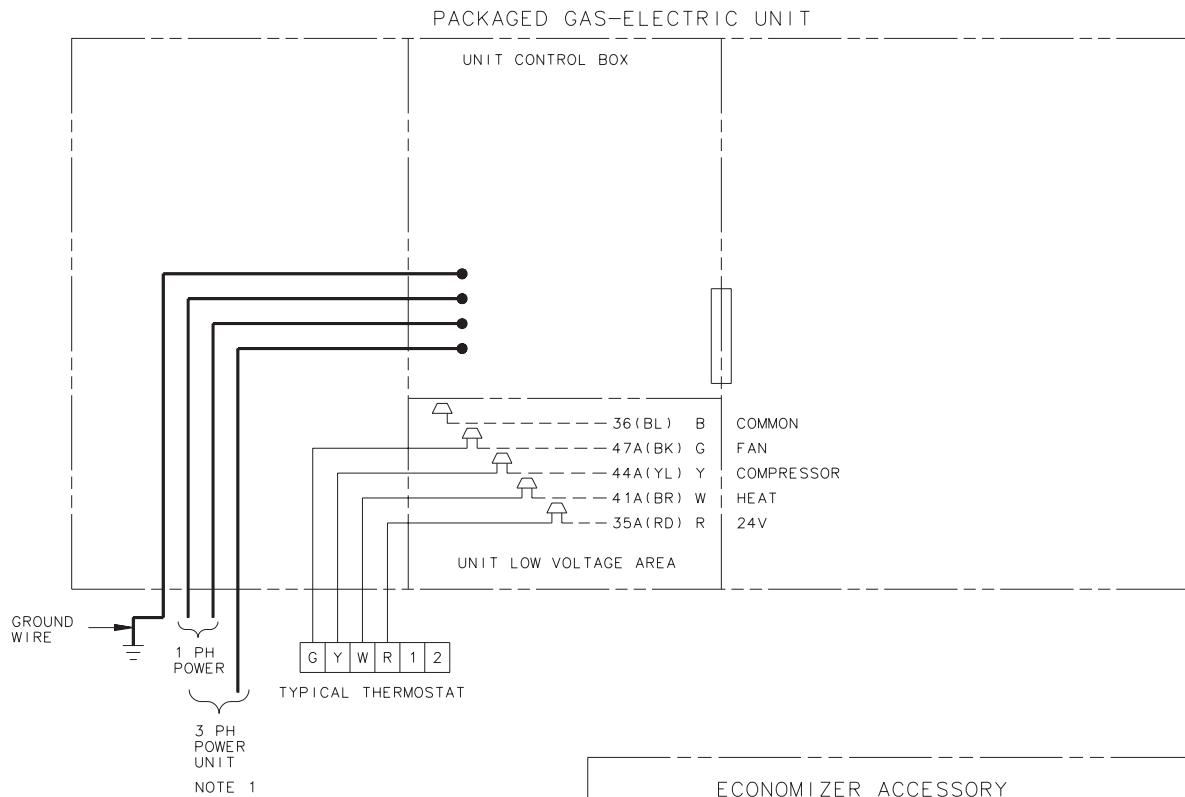

Two stages heating/cooling or one stage heating/cooling thermostats are available in either manual or automatic changeover.

Programmable Electronic Night Setback Thermostat

Heating setback and cooling setup with 7-day, 5-1-1 programming capability. Available in 2 heating/cooling or 1 heating/cooling versions with automatic changeover.

Typical Wiring

YCC Field Wiring Diagram

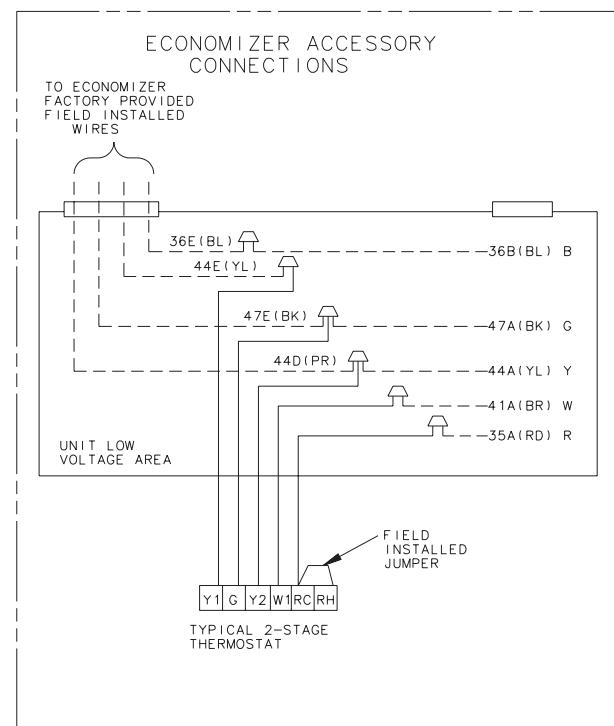

NOTES:

1. FUSED DISCONNECT SIZE, POWER WIRING AND GROUNDING OF EQUIPMENT MUST COMPLY WITH CODES.
2. BE SURE POWER SUPPLY AGREES WITH EQUIPMENT AND HEATER NAMEPLATE.
3. LOW VOLTAGE WIRING TO BE 18 AWG MINIMUM CONDUCTOR.
4. SEE UNIT DIAGRAM FOR ELECTRICAL CONNECTION DETAILS.
5. THE THERMOSTAT ON THE YCC UNIT MUST PROVIDE A "G" SIGNAL IN THE COOLING MODE ONLY. DURING THE HEATING MODE THE FAN WILL BE ENERGIZED BY THE SYSTEM.

Wiring Diagram for YCC

NOTES:

1. CONNECTIONS SHOWN ARE FOR A TYPICAL THERMOSTAT. SEE SCHEMATIC SUPPLIED WITH THERMOSTAT FOR PROPER CONNECTIONS. LOW VOLTAGE WIRING TO UNIT MAY BE NEC CLASS 2 AND MUST BE A MIN. OF 18 AW.G. SET THERMOSTAT HEAT ANTICIPATOR TO .3 AMPS.
2. MAXIMUM ADDITIONAL EXTERNAL LOAD (PILOT DUTY) BETWEEN "B" AND "R" OF 0.5 AMPS, 24 VAC IS AVAILABLE IN THE COOLING MODE ONLY.
3. FOR 208 VOLT OPERATION MAKE THE FOLLOWING WIRING CHANGES:
 A: AT TNS1 REMOVE 1D(RD) WIRE AND CONNECT TO 208V TERMINAL ON THE TRANSFORMER.
 B: AT IDM MOVE 20A(RD) LEAD FROM FTBA-B TO YELLOW LEAD AT CF2.
4. IF ANY OF THE ORIGINAL WIRE AS SUPPLIED IN THIS UNIT MUST BE REPLACED, REPLACE IT WITH APPLIANCE WIRING MATERIAL RATED AT 105° C.
5. INDOOR BLOWER MOTOR CONNECTIONS SHOWN ARE FOR THE YC*024F1, -030F1L, -036F1, -042F1 AND -060F1 UNITS. FOR INDOOR BLOWER MOTOR CONNECTIONS FOR THE YC*018F1, -030F1M, AND -048F1H UNIT SEE INSETS A AND B.
6. FOR YCC060F1 SEE INSET "C".

From Dwg. 21D661772

Mechanical Specifications Options

General

All units shall be factory assembled, piped, internally wired and fully charged with R-22. All units shall be designed to operate at outdoor ambient temperatures as high as 115° F. Cooling capacities shall be rated in accordance with A.R.I. standards. The YCC-F heating/cooling unit design is U.L. listed, specifically for outdoor applications using propane or natural gas. All units shall be designed for outdoor rooftop or ground level installation. Exterior surfaces of all units shall be phosphatized, zinc-coated steel with epoxy resin primer and baked enamel finish. Shipped for horizontal application, convertible to downflow.

Casings

All panels shall be 20-gauge steel, gasketed and insulated. Foil-faced glass fiber insulation shall be in the heat exchanger section. Foil-faced insulation shall be in the evaporator section. Base pan and mounting rails shall be 18 gauge. **WEATHERGUARD™** exterior corrosion resistant screws shall be used for added resistance to rust and corrosion.

Controls

Refrigeration cycle controls shall include condenser fan, evaporator fan and compressor contactors. Compressors shall be equipped with a combination internal winding thermostat/current overload. Internal high pressure relief shall also be provided.

Refrigeration System

Compressors — All units shall have hermetically sealed Climatuff® compressors. Compressors shall be equipped with over temperature, over current and high pressure protection. Crankcase heaters shall be standard on all three phase models.

Evaporator Coil — Internally enhanced 3/8-inch OD seamless copper tubing mechanically bonded to aluminum fins, factory pressure and leak tested at 250 to 300 psig.

Condenser Coil — Outdoor coils shall be internally enhanced 3/8-inch OD seamless copper tubing mechanically bonded to aluminum fins. Each coil shall be factory pressure and leak tested at 420 psig.

Indoor Air Fan — Direct-drive, forward-curved, centrifugal type. Motor shall have thermal overload protection. Permanently lubricated motor bearings. Motor/blower assembly isolated from unit with rubber mounts.

Condenser Fan — Direct-drive, draw thru propeller type. Weather-proofed permanent split capacitor fan motor shall have built-in thermal overload and permanently lubricated motor bearings.

Low Ambient — Standard refrigerant system operation down to 55° F. Low ambient accessory required for operation in 0° F. ambient condition.

Heating System

Gas-Fired Heating Section — Models shall provide completely assembled, wired and piped gas fired heating systems within unit. Design certified by U.L., specifically for outdoor application. Threaded gas connection on the unit.

Electronic Ignition System — Main burner is lit each time thermostat calls for heat. Flame sensor proves flame and keeps the main burners on. Should a loss of flame occur, the main valve closes and the spark recurs within 0.8 second. When thermostat is satisfied, main burner is extinguished.

Forced Combustion Blower — Insures flame stability under varying wind conditions. Gives higher combustion efficiency and location flexibility.

Heat Exchanger — Aluminized steel tubes. Free floating design.

Burners — 20-gauge aluminized steel. Multi-port inshot.

Downflow Accessories (U.S. Domestic Models)

Roof Curb — The roof curb shall be designed to mate with the unit and provide support and complete weather-tight installation when properly installed. Curb shall ship knocked down for field assembly, and include wood nailer strips.

Downflow Economizer

Modulating Economizer — This accessory shall be field installed and be composed of the following items: 0-100% fresh air damper, damper drive motor fixed dry bulb enthalpy control, and low voltage polarized plug for electrical connections. Solid state enthalpy or differential enthalpy control is optional. Economizer operations shall be controlled by the preset position of the enthalpy control. A barometric relief damper shall be standard with the economizer and provide a pressure operated damper that shall be gravity closing and prohibit entrance of outside air on equipment "off" cycle.

Manual Fresh Air Hood

Manual outside air provides a fixed outside air quantity from 0 to 25 percent. Includes hood and bird screen.

Low Ambient Control

Control allows cycling of compressor under low ambient cooling conditions. Required for cooling operation to 0° F.

Propane Gas Conversion Kit

— For conversion from natural gas to LP gas.
